

## LPCxpresso Value Pack

It has been really great to see the response that the LPCxpresso tool chain has got. The interest for LPCxpresso has been very high. We are now proud to announce that we have taken the next step to make LPCxpresso development even easier. We offer an LPCxpresso Value Pack comprising:

- A **10-pin to 20-pin JTAG Adapter** designed to convert between the ARM mini-JTAG connector (10-pin) and the standard ARM JTAG connector (20-pin). The LPC-Link uses the new mini-JTAG connector. This means that if you wish to connect the LPC-Link to your own custom board using a standard JTAG connector, you will need this adapter.
- The LPCxpresso **Prototype Board** with two pin lists.
- One mini-B to A **USB Cable**.

## Only 20 EUR!

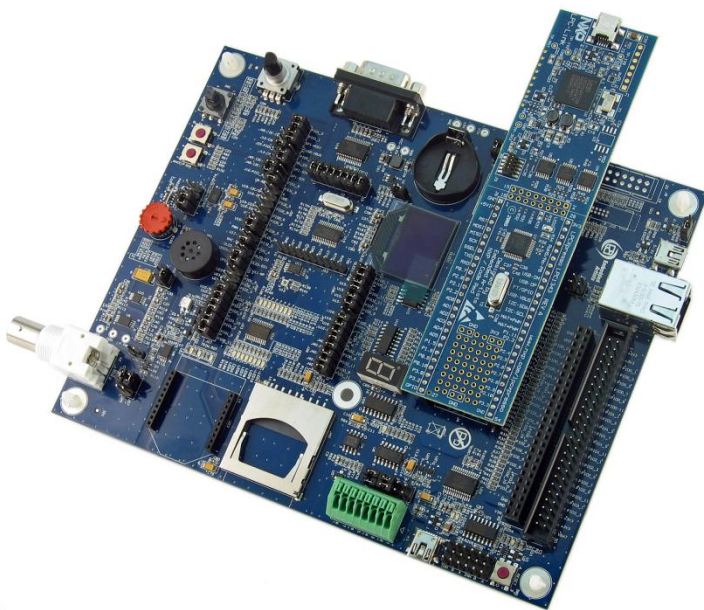

You save 30% compared to if you buy the parts separately.

## LPCxpresso Base Board Available

The LPCxpresso Base Boards are now in stock. Many **sample applications** have been developed to make it easy to get started.

## Embedded World

Embedded Artists will attend Embedded World together with NXP March 2-4. We will be there to exhibit the LPCxpresso products. We look forward to meeting you! If you would like to book a meeting with us just send an email to [maria.hall@embeddedartists.com](mailto:maria.hall@embeddedartists.com).

## NAND booting LPC31XX

Have you got an LPC31XX Base Board? There is a conflict on the databus when booting from NAND flash. Embedded Artists has created a small board that solves this problem.

This board can be ordered free of charge from [info@embeddedartists.com](mailto:info@embeddedartists.com). Please do not forget to include full address details in your e-mail.

## mbed

mbed is a tool for Rapid Prototyping with Microcontrollers. Both the LPCxpresso Base Board and the LPCxpresso Prototype Board are compatible with mbed.
